

VON DUPRIN® EL Conversion Kit

EL CONVERSION KIT

A new baseplate conversion kit makes it possible to convert Von Duprin Series 33, 35, 98 and 99 mechanical exit devices to electric latch (EL) retraction while maintaining their UL panic or fire listings. The kit is designed for easy field installation.

The EL feature provides remote unlocking capability for the exit device. A control station operator can flip a switch to retract the latch bolt and immediately change an exit only or latched door to push-pull operation. A powerful, continuous-duty solenoid retracts the latch bolt, for either momentary unlocking or for extended periods of time, in lieu of manual dogging.

EL devices are also useful with automatic door operators and may be applied to fire rated exit devices when tied into an automatic fire alarm system.

The kit is available to fit all styles except for 33/35 rim. When converting to EL operation, a power transfer from the frame to door will be required, as well as a power supply and a control product such as a keyswitch or keypad. These products are not included in the kit.

For existing applications, the kit can be used to replace any existing EL baseplate.

Series 98, 99
